Token overview · Oct 1, 2026 · @benji107

REEFDEX.FYI/REEF · BLOCKDAG CHAIN 1404

\$REEF: Reef's own token

A thank-you to the people who use Reef: an airdrop for early users, and a small presale whose every BDAG goes into the REEF/BDAG pool, locked for 12 months. **Fixed supply of 21,000,000. No governance, no revenue share, no promise of value.**

What \$REEF is

\$REEF is Reef's own token, and a **thank-you to the people who use Reef**. Early users and testers receive it through an airdrop, and a small presale seeds Reef's own pool: **every BDAG raised goes into the REEF/BDAG pool**, which is locked for 12 months.

It is **not a governance token**, it **pays no revenue share**, and nobody promises it will be worth anything. It lives on the community-run chain 1404 network and is separate from BlockDAG Network's own BDAG token and its exchange listings.

Key numbers

Total supply	21,000,000 REEF fixed: minted once at deployment; no mint function, no owner
Presale	1,050,000 REEF at 150 BDAG each maximum raise 157,500,000 BDAG · 2,500,000 BDAG per wallet (≈ 16,666.67 REEF)
Sale window	Wed Oct 7 – Fri Nov 6, 2026 09:00 UTC+7 (02:00 UTC) both days, or earlier if it sells out
Pool opens at	225 BDAG per REEF (1.5×) seeded by the presale contract; unsold presale REEF goes to the dead address
LP lock	365 days from launch held inside the presale contract; check with lpUnlockTime()
Refund fallback	After Fri Nov 13, 2026, 09:00 UTC+7 if the pool hasn't launched within 7 days of the close, every buyer can refund in full

Tokenomics

Bucket	Share	REEF	Terms
Liquidity	45%	9,450,000	Up to 700,000 is paired with the BDAG raised when the pool opens; the rest (at least 8,750,000) is locked in its own vesting contract after launch
Treasury	25%	5,250,000	Vesting contract: nothing for 6 months, then a straight line to 100% at 36 months
Dev	10%	2,100,000	Vesting contract: nothing for 12 months, then a straight line to 100% at 36 months
Airdrop	10%	2,100,000	For the first 1,000 wallets that use Reef during the sale window
Presale	5%	1,050,000	Sold at 150 BDAG each; anything unsold goes to the dead address, not to the team
Marketing	5%	1,050,000	About 210,000 thanks the community testers; the rest is locked in vesting after that round

No REEF leaves any team wallet before the pool is live, not for testers, the airdrop or marketing. Both vesting contracts release nothing at the cliff (no lump sum), then vest in a straight line; anyone can read the exact times on-chain with **cliffEnd()** and **end()**.

How the presale works

One small contract. No owner, no admin.

- 1 **Buy with BDAG** during the window, directly from the presale contract. You receive nothing yet: no presale REEF circulates before the pool exists.
- 2 **Anyone launches the pool** by calling **finalize()** once the sale ends or sells out. It pairs every BDAG raised with REEF at exactly 225 BDAG each and sends unsold presale REEF to the dead address.
- 3 **Claim your REEF** from the presale contract: what you paid ÷ 150.
- 4 **LP stays locked** in the presale contract for 365 days, and can then only go to Reef's liquidity wallet.
- 5 **If the pool can't launch** within 7 days of the close, everyone can **refund()** their BDAG in full, and the launch is permanently cancelled.

Read this before buying. The pool opening at 225 is not a promise that REEF will trade at 225, or anywhere near 150. It opens thin, and the first sellers will move the price, possibly a long way below what you paid. BDAG on this chain has no outside market, so there is no dollar value here either. Only use BDAG you are fully prepared to lose. The presale contract has no owner and no way for anyone to withdraw the BDAG; the only exits are into the pool or back to buyers.

Airdrop

2,100,000 REEF for the first 1,000 wallets.

Tier	Shares	What qualifies (Oct 7 – Nov 6, 09:00 UTC+7)
Tier 1	1	A swap on Reef moving at least 1,000 BDAG
Tier 2	3	Adding at least 5,000 BDAG of liquidity to a Reef pool in one go
Tier 3	10	Deploying your own token and creating its first Reef pair, with at least 25,000 BDAG of your own liquidity in it

- **First 1,000 wallets are in**, ranked by their first qualifying action. One claim per wallet, at the highest tier it reached. Team wallets are excluded. Only BDAG pairs on Reef count.
- **Size:** 2,100,000 REEF shared across all shares, at most 2,100 REEF per share. A mix of tiers makes one share smaller; nothing is split beyond the cap.
- **Claims** open after the pool is live and close Thu Feb 4, 2027, 09:00 UTC+7. Unclaimed or unallocated REEF then goes to the dead address, never to the team.
- **Check it yourself:** the full list, every amount and proof, and the script that produced them will be published, so anyone can recompute the result from public on-chain events.

Income and utility

Does REEF pay passive income?

No. Holding REEF pays nothing: no staking yield, no share of Reef's fees, no buybacks. REEF can't mint, so any "yield" would only be the project handing out its own supply.

The income that does exist comes from **providing liquidity**: liquidity providers in the REEF/BDAG pool earn 0.25% of every trade through it, in proportion to their share, paid by traders, not by the project. It moves with trading volume and carries real risks, including impermanent loss. A time-limited extra reward for REEF/BDAG liquidity providers is being considered; nothing is promised.

What REEF is for

Today: thanking early users and testers, and giving Reef its own pool.

Planned, not promised: REEF as a **bond** across Reef, Nodal and Handshake. For example, a pool creator locks REEF for a "bonded" badge that is burned automatically if they pull the liquidity soon after launch. You put REEF at risk to be trusted; you don't get paid for holding it.

Each of these would be a separate contract, published and tested before it goes live, and announced on the \$REEF page first.

What \$REEF is not

- **Not a governance token:** holding REEF gives no vote over Reef or anything else.
- **Not a revenue share:** REEF has no claim on Reef's trading fees; the 0.05% protocol fee goes to Reef's treasury, not to holders.
- **Not a promise of value:** no price target, no listing promise, no roadmap that depends on the price.
- **Not connected to BlockDAG Network's token or listings:** \$REEF is separate from BlockDAG Network's own BDAG token, its migration and its exchange listings.

Contracts

Chain 1404, community network · [rpc.blockdag.engineering](#) · always check the address, not the name

ReefToken	Fixed supply, no owner 0xb7a1e198767bf0fd4C1C3805b9757369e1c3F416
Presale	Buy & claim here only posted on reefdex.fyi/reef/ before the sale opens on Oct 7
Dev vesting	12-month cliff, 36 months 0x5468821749B936ffa6C3aF840841058b026E288f
Treasury vesting	6-month cliff, 36 months 0x8750aC546e0B6234B292F3830958F780E3e304BD
Airdrop claim	Deployed after the sale posted on reefdex.fyi/reef/ after the Nov 6 snapshot
REEF/BDAG pool	Address fixed in advance; empty until launch 0x1Ea359266c19635c4e92B8dEf5933AbFc6A9182D
Liquidity wallet	Pairs REEF at launch; receives LP after the lock 0xa07C0993E37e50E6DD4Cfd0F190A4c976b273418
Presale holder	Funds the presale contract 0xdFa06aE38addc9aa11Df033bE457CD6D00153942
Airdrop holder	Funds the airdrop claim contract 0xC87ac8FDDB6EF32a2fEE40500FBb24E4ea54Acc6
Marketing	Tester thank-yous, then vesting 0xaFb7f412dE83978188fAc2248e3A5f9A71dCf386

Security and testing

A thorough in-house review; no independent professional audit.

Check	Result
Static analysis (Slither 0.11.6)	Run Sep 30 on all Reef and \$REEF contracts: 59 findings, each reviewed; no real issues (standard Uniswap V2 patterns or intended behaviour)
Presale rehearsal	70/70 against Reef's real contracts with the real sale dates, including deliberate attacks. Found and fixed: anyone could block the pool launch for about 0.016 BDAG of gas and force refunds; the deployed version seeds the pool directly and is immune
Airdrop	11/11 end to end, including a 1,050-wallet run: exactly the first 1,000 qualified and all 1,000 claims succeeded
Chain compatibility	All \$REEF contracts compiled for Berlin, the EVM version Reef targets, and checked free of newer opcodes such as PUSH0

Not done yet: an independent audit by a professional security firm. The tests will be published with the source; that is not the same as an audit.

Before you take part

Where to buy

Only through the presale contract address posted on **reefdex.fyi/reef/**. Anyone sending you a different address, a DM or a "whitelist" link is not us.

Your wallet signs everything; the page never holds your funds. Every transaction is simulated first, so the contract's own reason shows before you sign.

Who can't take part

US and UK persons may not buy in the presale or claim the airdrop. Only take part where it is lawful for you, and only if you are 18 or older.

Chain ID 1404 is used by two separate networks. \$REEF lives on the community-run network; if your wallet shows something different from the \$REEF page, stop and check before signing.
